

Grupp X

Group Meeting 15/10

15 OCTOBER 2021 / 08:30 PM / ROOM ED-3705

ATTENDEES

Pegah Amanzadeh, Simon Holst, Kevin Pham, Carl-Magnus Wall

AGENDA

Reports

1. Kevin and Pegah have worked on various FXML methods and functionality, such listing deletion, unsubscriptions and book reservations. Everyone participated in splitting the code into proper packages. Simon has worked on displaying listing information correctly, and Carl-Magnus has been working on code analysis as well as documentation (RDD/SDD/Report).

Objectives

- Plan the final week of the project.
- Figure out exactly which features remain unimplemented.
- Discuss bugs found by SpotBugs, and discuss remedies.
- Discuss JDepend analysis. Look into PMD too?
- Assign speaking order/topics for each member, regarding the oral presentation.
- JUnit, we desperately need to implement more tests.
- Discuss design patterns, refactor certain classes?

NOTES

- Package-splitting worked well.
- We have a good idea of how to model the report.
- Speaking order -> Carl-Magnus -> Kevin -> Simon -> Pegah
- Simple tests should be easy and fast to implement.
- SpotBugs bugs seem easy to fix, nothing major.
- JDepend analysis is quite cryptic. Will require some more analysis.
- PMD seems to report different, interesting things. Will look into this more next week.
- Peer review returning on Monday. Hopefully some ideas will come from it.

ACTION ITEMS

1. As per usual, keep RDD and SSD, as well as the report up to date.
(Everyone)
2. Since we have now split the code into packages, we need to make sure appropriate classes are package-private and immutable. (Everyone)
3. Simon will implement the Search feature.
4. Pegah will continue with work on book reservations.

END OF MEETING

Next supervision meeting will be held on 21/10 at 13:15

Next group meeting will be held on 18/10 at 08:30.
