Grupp X

Group Meeting 27/09

ATTENDEES

Pegah Amanzadeh, Simon Holst, Kevin Pham, Carl-Magnus Wall

AGENDA

Reports

1. The group has suffered some setbacks regarding the communication between the views and controllers. When working with Scenebuilder, we cannot set the controller to the actual controller (since it hasn't been created yet). We asked Pelle what to do, and we were advised to generate getters/setters for the controllers and set them after the fact. The problem is that this doesn't really seem to work. When initializing the views we have to set at least something as the controllers, and even if we set the correct value later, the application cannot find the methods to use. It seems to still look for methods in the first controllers that were set (which are just the views themselves). We have combined the views and the controllers for now, as a temporary fix. The model can still be kept hidden from the views themselves, but now we don't really know how to implement the observer pattern.

Objectives

- Discuss possible solutions to the problem.

NOTES

- Until we can have a meeting with Pelle, we will continue working on the logic in the model.
- We have to prepare a proper explanation of the issue before the meeting. Explain our reasoning and previous design choices.
- We will remove the view classes for the time being.

ACTION ITEMS

1. Focus on working on the model, and test things to see if they work.
2. We will work collaboratively on preparing a mission statement. It is important that we explain our problem clearly.

END OF MEETING

Next supervision meeting will be held on 30/9 at 13:15

Next group meeting will be held on 1/10 at 08:00.
