Grupp X

Group Meeting with Pelle 29/09

29 SEPTEMBER 2021 / 11:00 PM / Zoom

ATTENDEES

Pegah Amanzadeh, Simon Holst, Kevin Pham, Carl-Magnus Wall, Pelle Evensen

AGENDA

Reports

1. The group has realized that Scenebuilder seems to be the main culprit in the problems regarding the separation of the views and their controllers. Every example of MVC implementation (with Scenebuilder involved) that we can find online simply combines the view/controller part of the system.

Objectives

- Discuss with Pelle if this is a reasonable approach.
- Discuss how to work with the Observer pattern if we refactor the code in the suggested way.

NOTES

- The suggested approach does not break the MVC pattern, and if it makes things easier when it comes to working with Scenebuilder, we should move forward with it.

- The observer pattern can still be used, but we should implement some type safety measures. We will try to adapt the observer and observable interfaces the best we can.
- UML diagram will have to be altered to fit the new approach.

ACTION ITEMS

1. First line of action is to make sure all buttons work, so that we can split up work with the logic in the model. Merge conflicts regarding FXML and Scenebuilder aren't always the easiest to handle, so we will try to work on these elements together on campus
2. We will work together on updating the UML.

END OF MEETING

Next supervision meeting will be held on 30/9 at 13:15

Next group meeting will be held on 1/10 at 08:00.
